

REGENERATE SKIN AT THE CELLULAR LEVEL

WITH ANTEAGE BONE MARROW
STEM CELL TECHNOLOGY

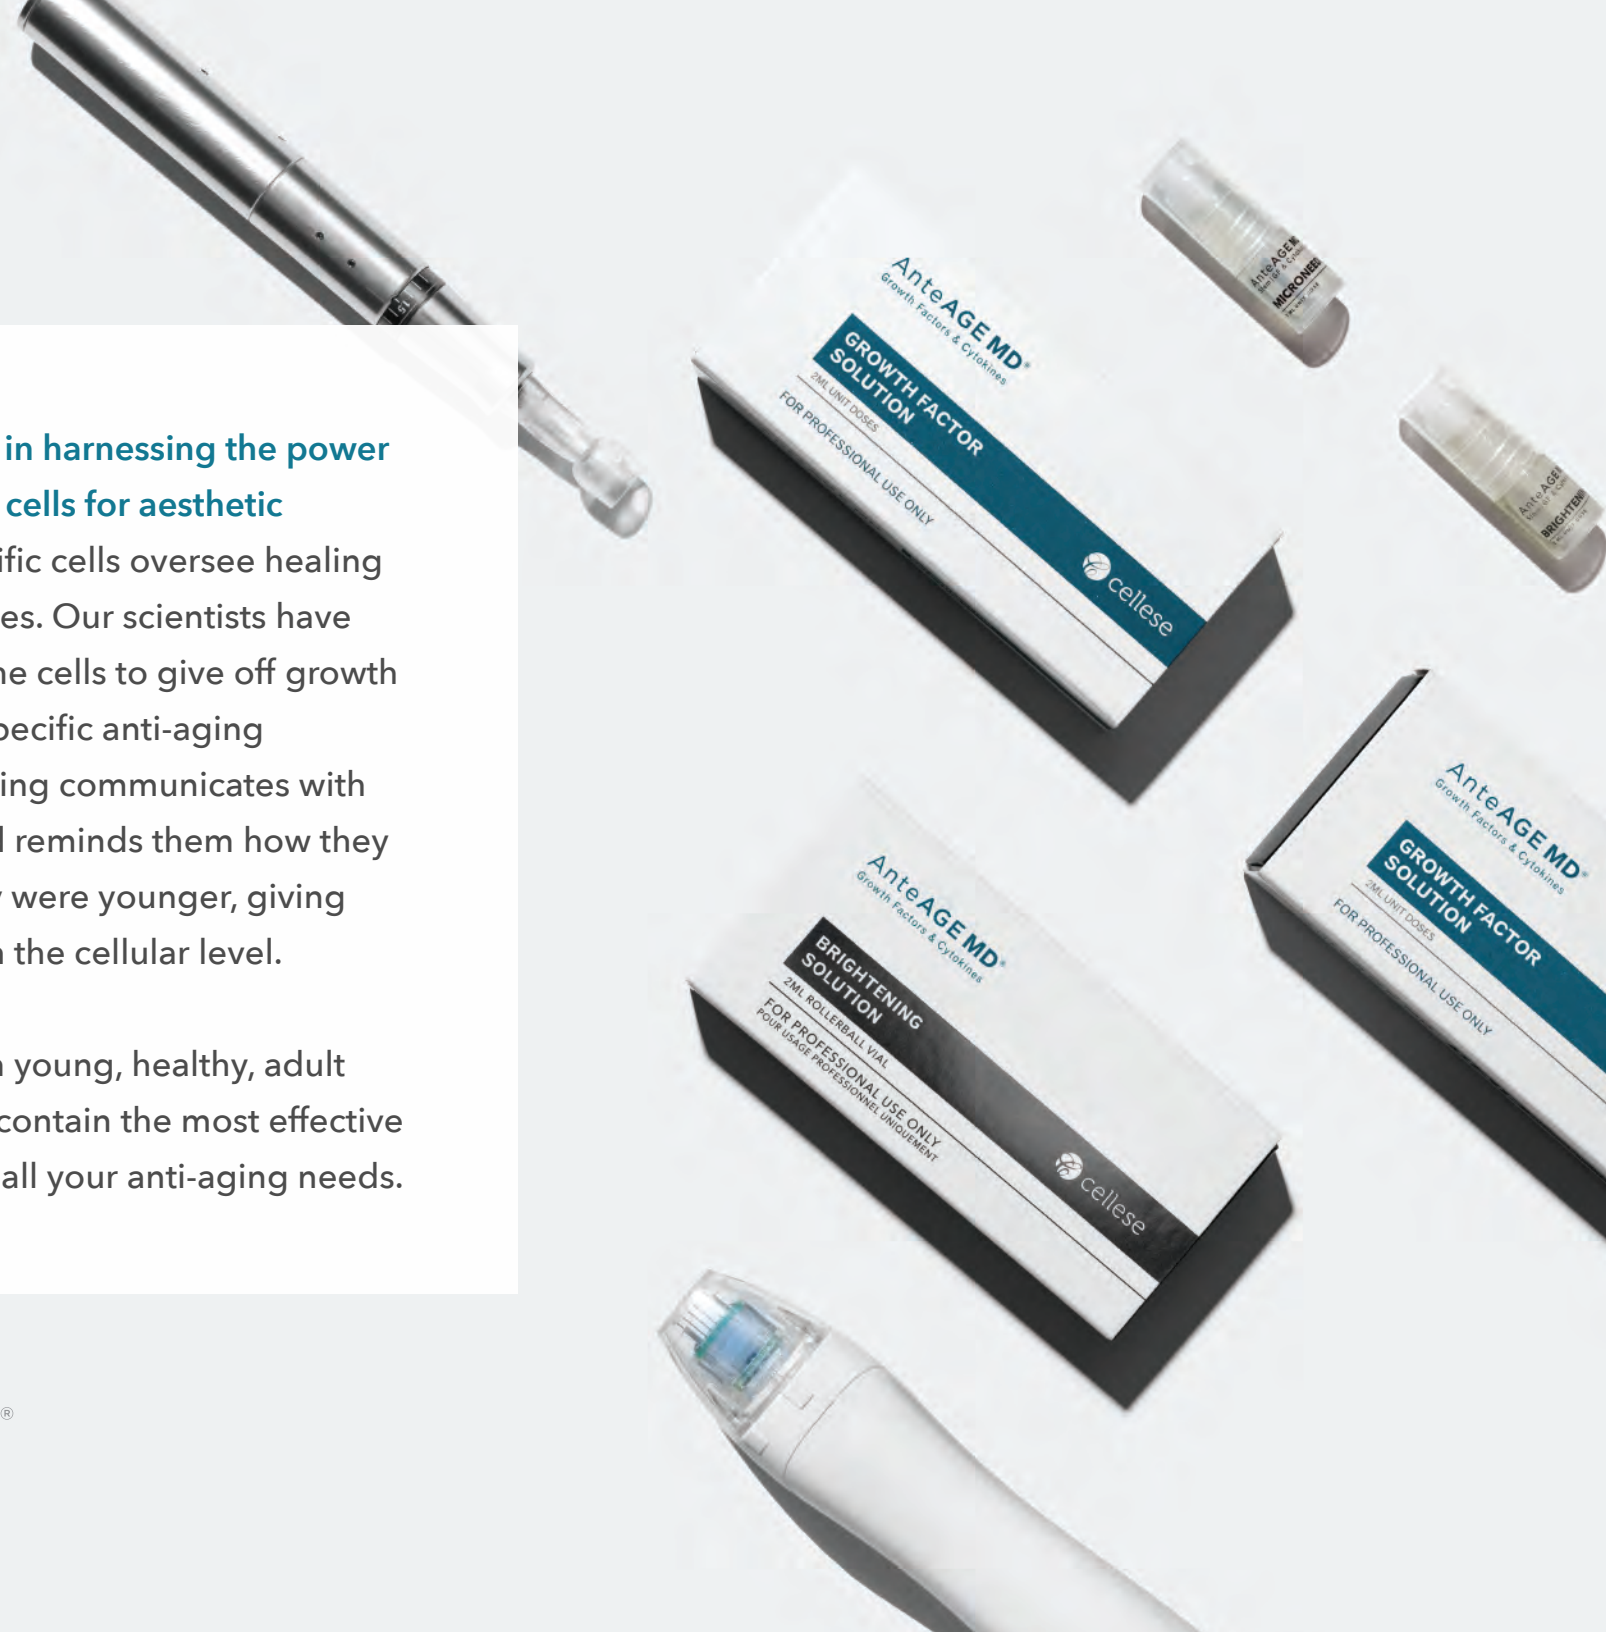

AnteAGE MD®
Growth Factors & Cytokines

AnteAGE is a pioneer in harnessing the power of bone marrow stem cells for aesthetic purposes. These specific cells oversee healing and repair in our bodies. Our scientists have found a way to train the cells to give off growth factors that address specific anti-aging properties. Cell signaling communicates with your existing cells and reminds them how they once acted when they were younger, giving you youthful skin from the cellular level.

Ethically sourced from young, healthy, adult donors, our products contain the most effective source of proteins for all your anti-aging needs.
